DECLARATION

We hereby declare that the work which is being presented in this Web Development Project “**FARM TECH SYSTEM**” in complete fulfillment of the requirements for the award of **Bachelor of Technology** and submitted to the Department of Computer Science and An Applications of GLA University, Mathura is an authentic record of our own work carried under the Supervision of **Mr. Mandeep Singh**, Assistant professor of computer engineering department.

Vivek Bhardwaj (191599019)
Vikas Shrotiy (181599004)
Mandavi Upadhyaya (171500178)

VIth semester

ACKNOWLEDGEMENT

I have taken efforts in this project. However, it would not have been possible without the kind support and help of many individuals. On the completion of this project, I would like to extend my sincere thanks to all of them. I am highly indebted to this project guide **Mr. Mandeep Singh, Technical Trainer** for their guidance and constant supervision as well as for providing necessary information regarding the project. I wish to extend my sincere gratitude to **Prof. Anand Singh Jalal, Head of Department of Computer Engineering and Applications** and faculty of CEA Department of **GLA University** for their guidance, encouragement and give this opportunity and valuable suggestion which prove extremely useful and helpful in completion of this report. I would also like to thank all those who directly or indirectly supported or helped me. I would like to express my gratitude towards my parents and member of my college for their kind cooperation and encouragement which helped me in completion of this project. All of them have willingly helped me out with their abilities.

ABSTRACT

In this WEBSITE DEVELOPMENT project, we will build an E- market with an easy interface for the public to access crops like wheat, rice, oil and other products like vegetables etc. This e-store platform will allow both local shopkeepers and customers to meet on the same platform. This platform will be used by the shopkeepers to market and boost their business and this will also help the farmer and the buyer to sell and purchase the goods and product at reasonable price.

It will allow the public to buy the goods and product with their favorite shopkeeper. We will build a website with easy options .customer can save money by comparing prices among different shops while staying safe at home. This website will help the public to avoid queues and the shopping process will be faster and cost-efficient

Home business will get a good business opportunity on this platform and they can grow in a better way. This website will encourage local shopping among the public. To develop this web-based application or software we have used HTML5, CSS3, JavaScript and php.

1. INTRODUCTION

General Introduction to the topic

Web development is a specific field of software engineering that focuses on building web pages. Web pages, or web apps, are codebases that are downloaded and run in our web browser (e.g., Google Chrome) each time a user navigates to the website address. The web development process includes web design, web content development, client-side/server-side scripting and network security configuration, among other tasks. The major building blocks of the web are HTML, CSS, and JavaScript. We will be using all three languages. We can also think of web development as being split into two main categories: front end and back end.

Objective

Our motive is to create a platform where local businesses get better opportunities to reach customers. This website will allow all sorts of local businesses to grow. It will support our PM's initiative of '**vocal for local**'. The public can also purchase things at a better price and without going out. It will provide an excellent opportunity for home businesses to showcase their products free of cost. Every local shop owner can advertise their shop.

About the Project:

In this project we need admin farmer and buyer model. It is like a e-commerce site, admin control all things like price bill details, and farmer can upload their product to this but rate is fixed by admin and users are purchase the product and he can pay by cash ,card or net banking but bill must be generated and send the confirmations. and admin generate all bills and he can generate the report like top selling times.

Motivation:

As we all know about the conditions of the farmers they work hard for their Livelihood but don't get the good prices for their products which they are selling to the government because government fixed the price for a particular Product and that's not worth for the farmers because they don't get profit according to their work and that's disappointing for them. So we decide to make a site which will purchase the item on good price and sell it accordingly. So none of the seller or the buyer suffer from loss

Future prospects:

In future the site will be available in the smart phones in the form of application which is more effective and convenient for the user to use .Some features will also be added to it like voice assistance .which help those persons who cannot write on it and the application is also available in different languages so the user don't have problems while use it.

Problem Definition

Most of the people nowadays prefer online shopping, this become more convenient for them as most of the things they want are available online and can be purchased with a single click. There are some areas of online shopping which needs to be covered like most of the time one has to visit shop to buy goods related to construction. So, we are trying to make an online platform which provides these types of construction material goods.

Methodology

We are using Webpage Portal as the frontend with the backend made using Maria DB database. To see what's inside the webpage user has to login, if the user is not register, he/she can also register himself/herself. It will keep records of farmer and buyer as well as past issues which we have feed there. The modules used in this are listed as follows:

- Main webpage
- My Profile
- Upload crop details
- Records
- Logout

Features of FARM TECH SYSTEM

- Customers have advantages like Shopping without going in queues, Cashless payment options, pickup from the shop.
- Local shopkeepers can scale their business and multiply customers easily. Easy and cheap digitalization of the shop. Crowd handling will be easy.
- It is an inexpensive and more practical way of promoting local businesses.
- Home businesses can sell anything without a shop. A great earning opportunity and free advertisement. The better customer reaches and showcasing products will be easier and more effective.

Why FARM TECH ?

This website is beneficial for both parties (i.e. shopkeepers and customers). Here are some of the essential benefits of using FARM TECH SYSTEM.

Users

- Your market Encyclopedia
- Saves from long queues
- Corona Protection
- Free flash delivery
- Free Entertainment

Shopkeepers

- Easy digitalization of shops.
- Increased customer reach.
- Convenient crowd handling.
- Free advertisement of products.
- Easy inventory management features.

Home Business

- Bring business online
- Sell anything without owning a shop.
- Quick earning opportunity.
- Better customer reach.
- Free Marketing

2. SOFTWARE REQUIREMENT ANALYSIS

Requirement analysis can be done in three steps: -

1. Defining the user requirement.
2. Studying the present system to verify the problem.
3. Defining the performance expected by the candidate to use the requirement.

2.1 Hardware Requirements

Processor: Intel dual-core

Processor Speed: 1.5GHz

RAM: 2GB

Software Requirements

Operating System: Windows 10

Visual Code Studio/Sublime

Studio Apache Web Server

SQL Server

Technologies Required

Front- End: HTML5, CSS3, BOOTSTRAP,JAVASCRIPT

Back - End: PHP,SQL

Technologies:

HTML: HTML is the standard mark-up language for creating Web pages. It describes the structure of a Web page.

CSS: CSS describes how HTML elements are to be displayed on the screen, paper, or in other media.

JAVASCRIPT: JavaScript is the Programming Language for the Web. JavaScript can update and change both HTML and CSS.

BOOTSTRAP: It is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first websites. It is the most popular HTML, CSS, and JavaScript framework for developing responsive, mobile-first websites.

PHP: PHP is a server scripting language and a powerful tool for making dynamic and interactive Web pages.

SQL: SQL is a standard language for storing, manipulating and retrieving data in databases.

3. IMPLEMENTATION DETAILS

After carefully analyzing the system Implementation of System can be represented in following parts and roles –

- ❖ Administrator
- ❖ Moderator
- ❖ User

Administrator:-

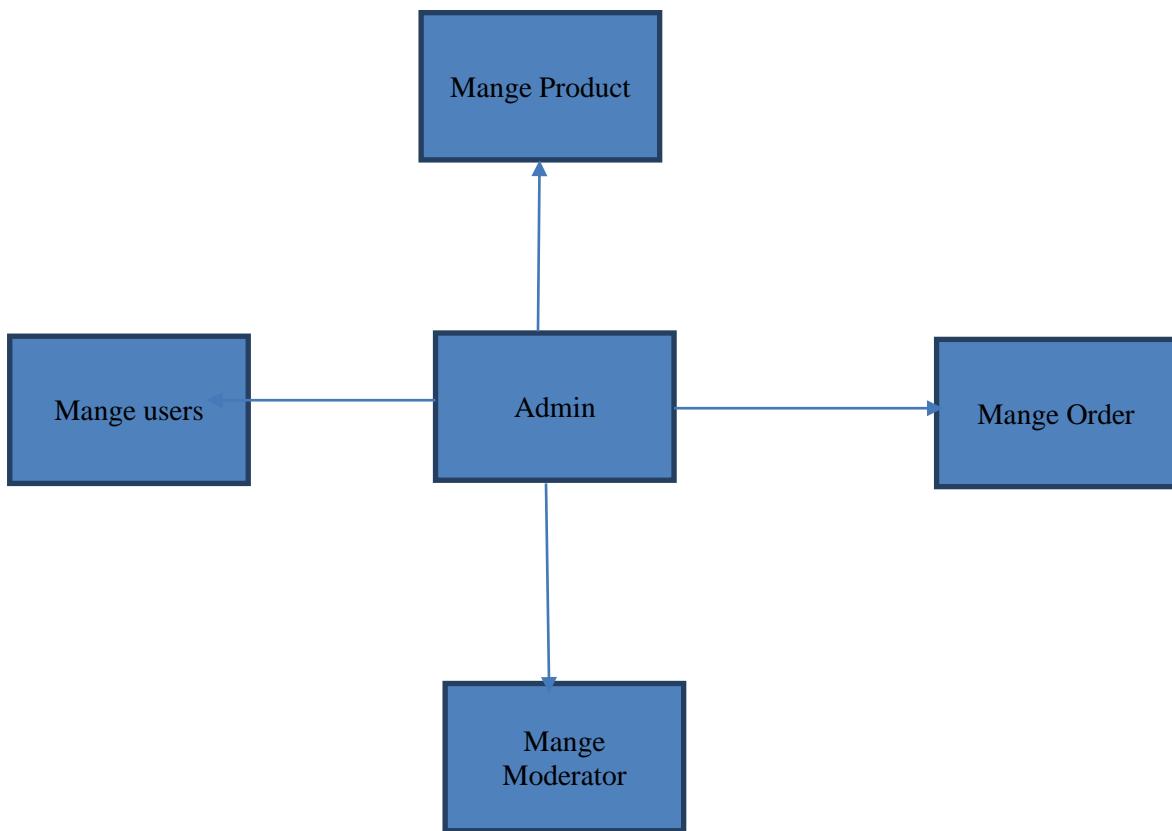

The administrator is the super user of this application. Only admin has access to the admin page. Admin may be the owner of the shop. The administrator has all the information about all the users and all products.

Functions of the administrator are:

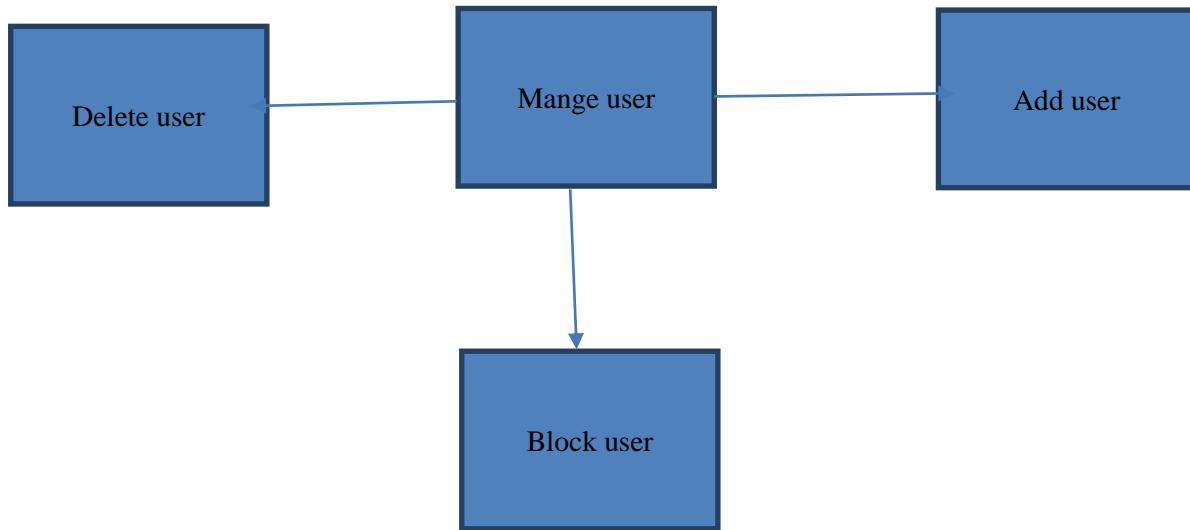

1. Manage Products
2. Manage Moderators
3. Manage Users
4. Manage Orders

Manage Product

- **Delete Products**- Admin can delete the product as per the required or not.
- **Add Products**- Admin can add the product in the existing system with all details including an image.
- **Search Products**- Admin will have a list view of all the existing products. He can also search for a particular product by name

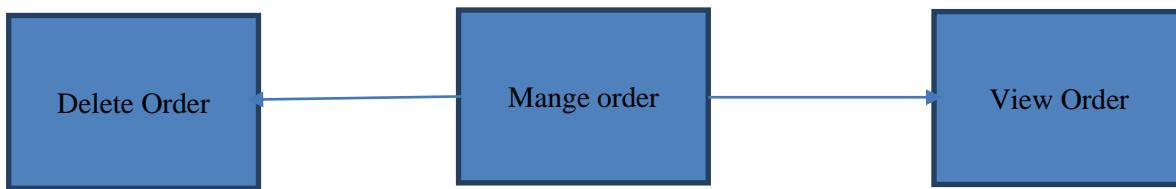

Manage User

- **Delete User**- Admin has a right to delete or block a user. The default status of a new user registered is set as blocked. The admin must accept the new user by unblocking him.
- **View User** - The admin will have a list view of all the users registered in the system. Admin can view all the details of each user in the list except the password.
- **Add User** - Admin has privileges to add a user directly by providing the details.

Mange Order

- **Delete Order** - Admin can delete an order from the orders list when the product is taken for delivery.
- **View Order**- Administrator can view the Orders which are generated by the users. He can verify the details of the purchase.

4.SYSTEM DESIGN

Systems design is the process of defining elements of a system like modules, architecture, components and their interfaces and data for a system based on the specified requirements. It is the process of defining, developing and designing systems which satisfies the specific needs and requirements of a business or organization.

There are two types of design:

Logical design: To represent the data flow, inputs and outputs of the system. Example: ER Diagrams (Entity Relationship Diagrams).

Physical design: Defined as

- a) How users add information to the system and how the system represents information back to the user.
- b) How the data is modelled and stored within the system.
- c) How data moves through the system, how data is validated, secured and/or transformed as it flows through and out of the system.

4.1 Input and Output Design

4.1.1 Input Design System design takes the following inputs –

1. Statement of work
2. Requirement determination plan
3. Current situation analysis
4. Proposed system requirements including a conceptual data model, modified DFDs, and Metadata (data about data).

Output Design

Computer output is the most important and direct source of information to the user. Output design is a very important phase since the output needs to be in an efficient manner. Efficient and intelligible output design improves the system relationship with the user and helps in decision making. Allowing the user to view the sample screen is important because the user is the ultimate judge of the quality of output. The output module of this system is the selected notifications.

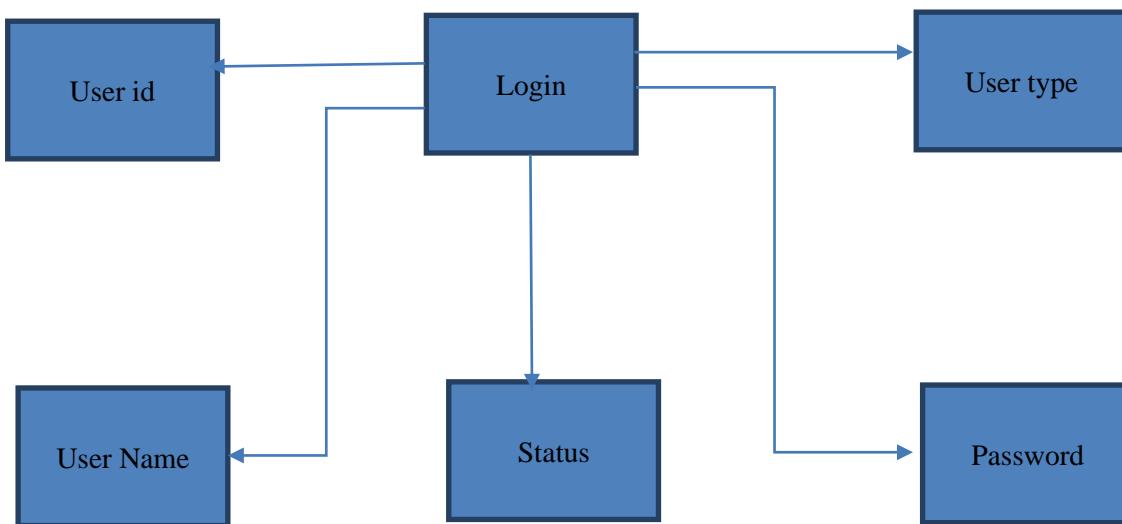

Database Design

Databases are the storehouse of data used in software systems. The data is stored in tables inside the database. Several tables are created for the manipulation of the data for the system.

Two essential settings for a database are

Primary key – the field that is unique for all the record occurrences

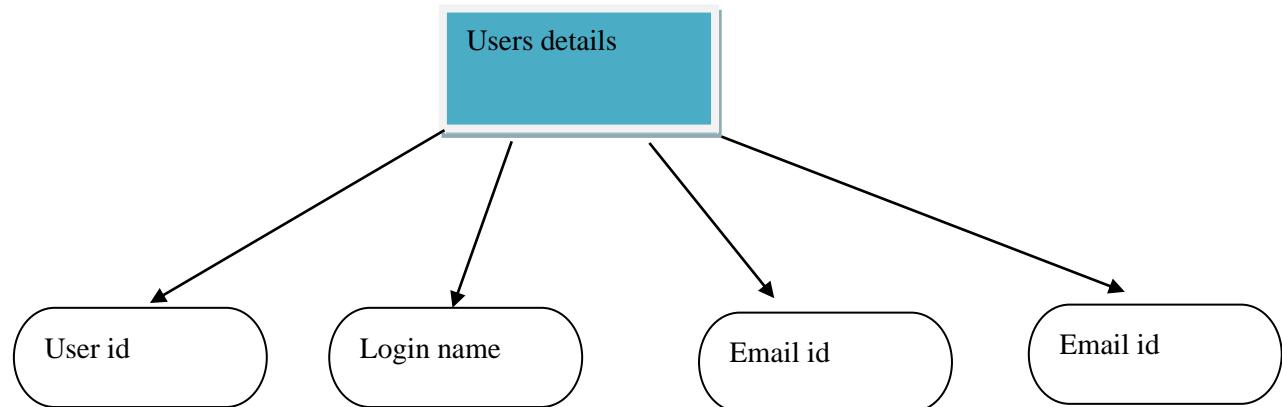

Foreign Key – the field used to set relations between tables

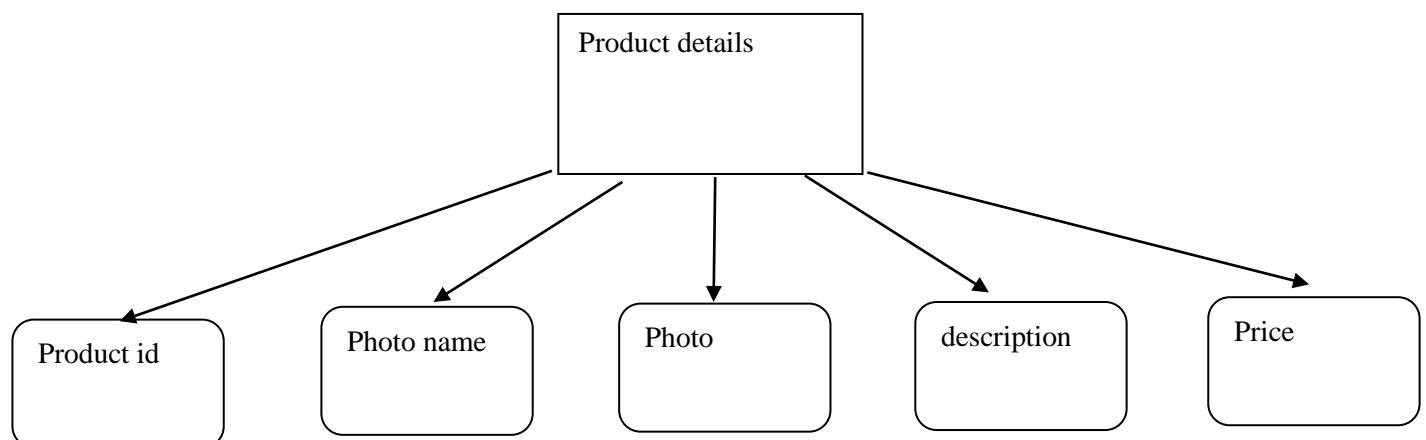

ER Diagrams

Login

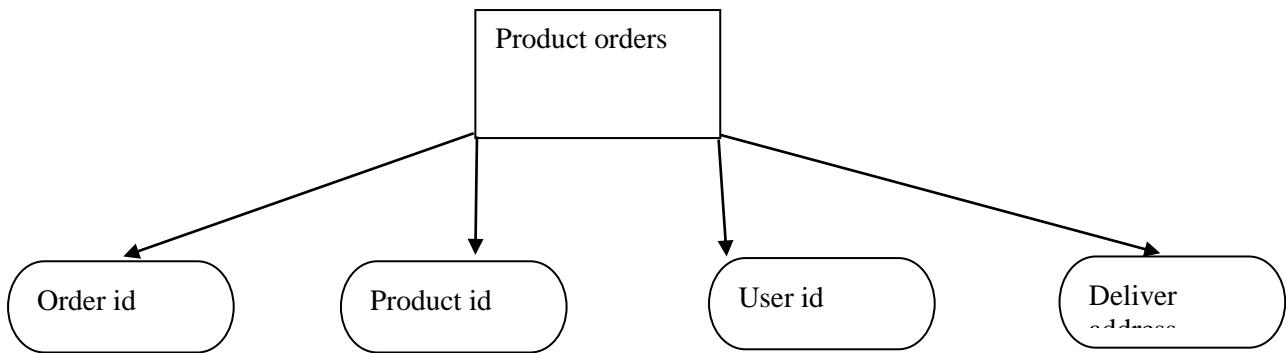

User details

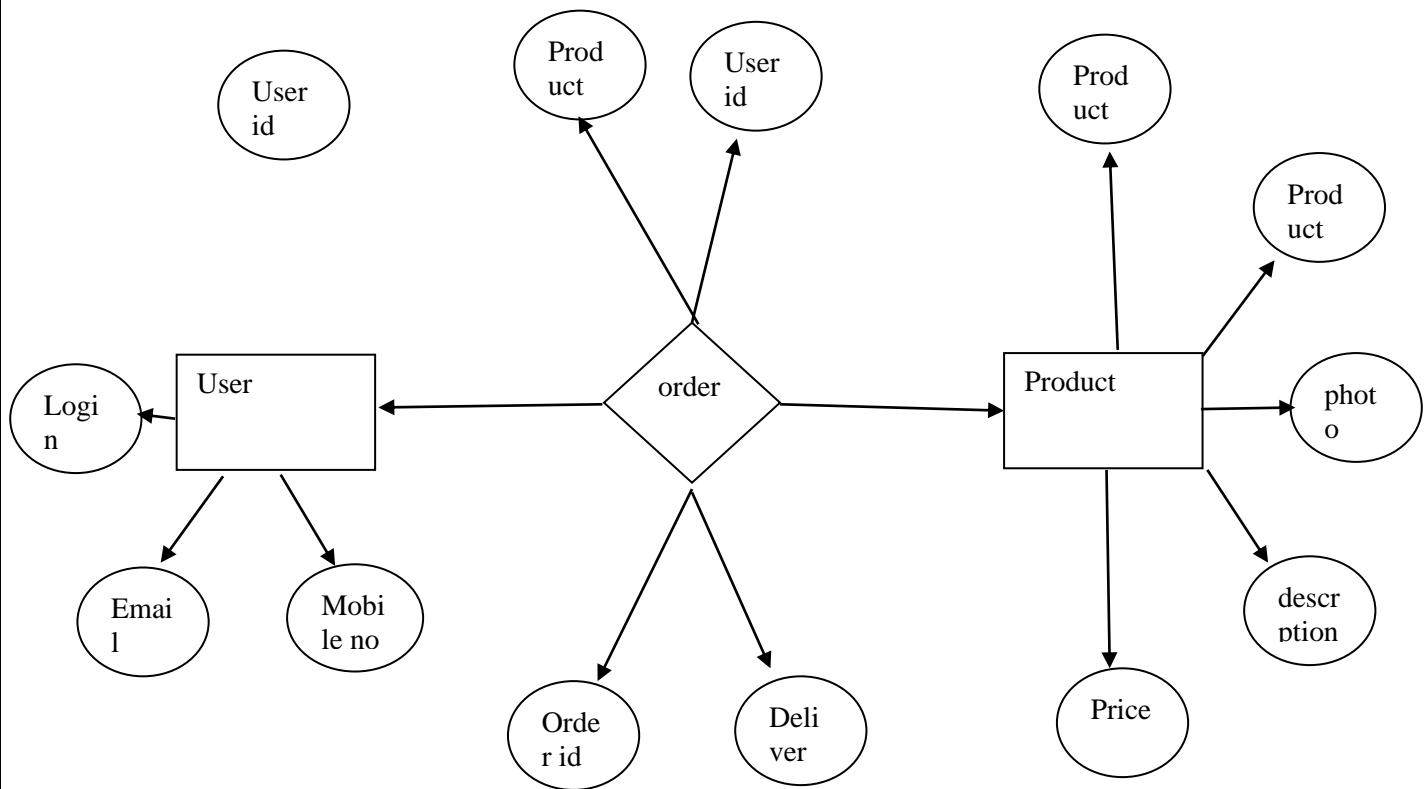

Product details

Product Orders

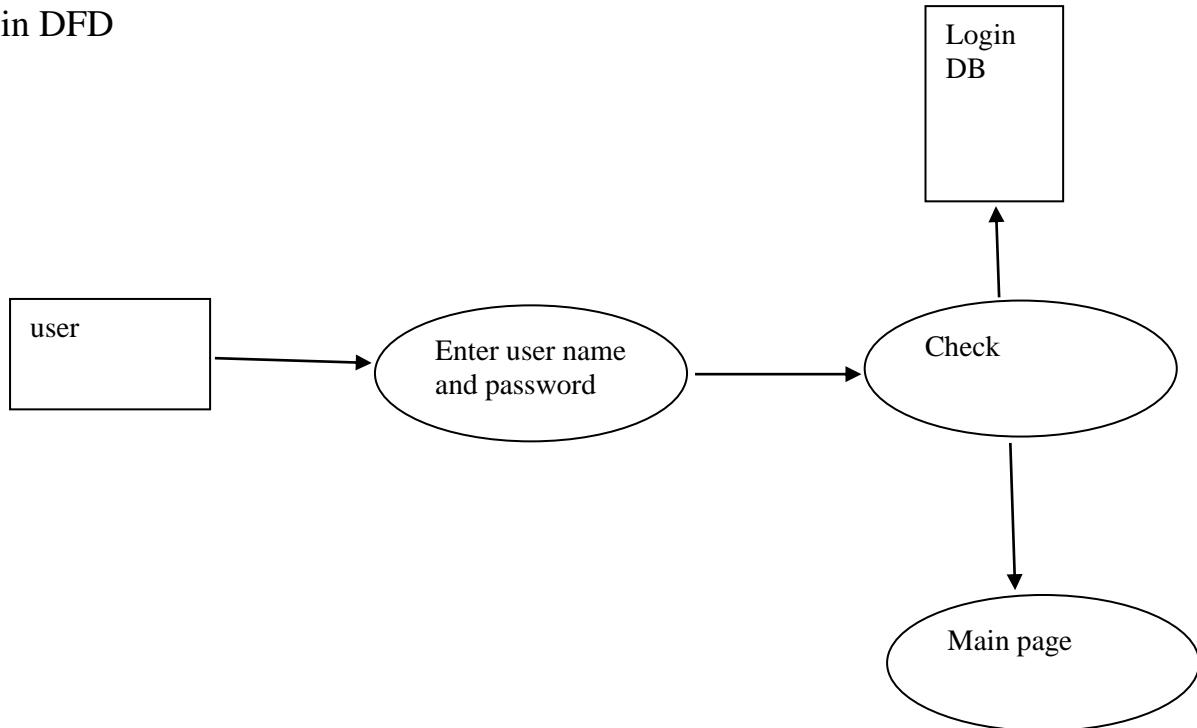

Complete diagram

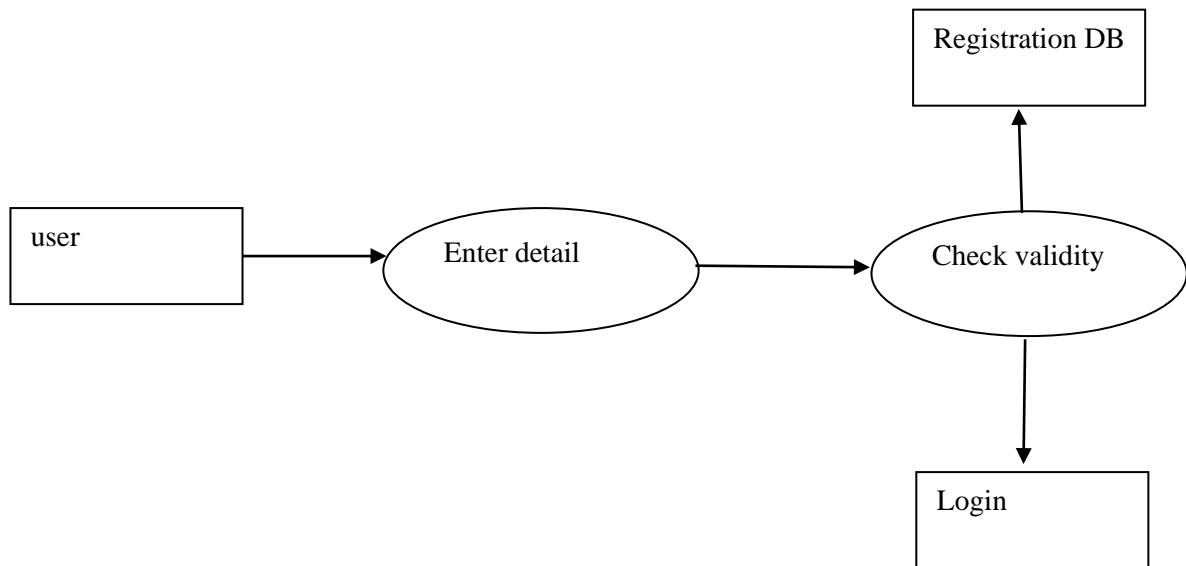

4.4 Data flow Diagram

A Data Flow Diagram (DFD) is a structured analysis and design tool that can be used for flowcharting. A DFD is a network that describes the flow of data and the processes that change or transform the data throughout a system. This network is constructed by using a set of symbols that do not imply any physical implementation. It has the purpose of clarifying system requirements and identifying major transformations. So it is the starting point of the design phase that functionally decomposes the requirements specifications down to the lowest level of detail. DFD can be considered to be an abstraction of the logic of an information-oriented or a process-oriented system flowchart. For these reasons, DFD's are often referred to as logical data flow diagrams.

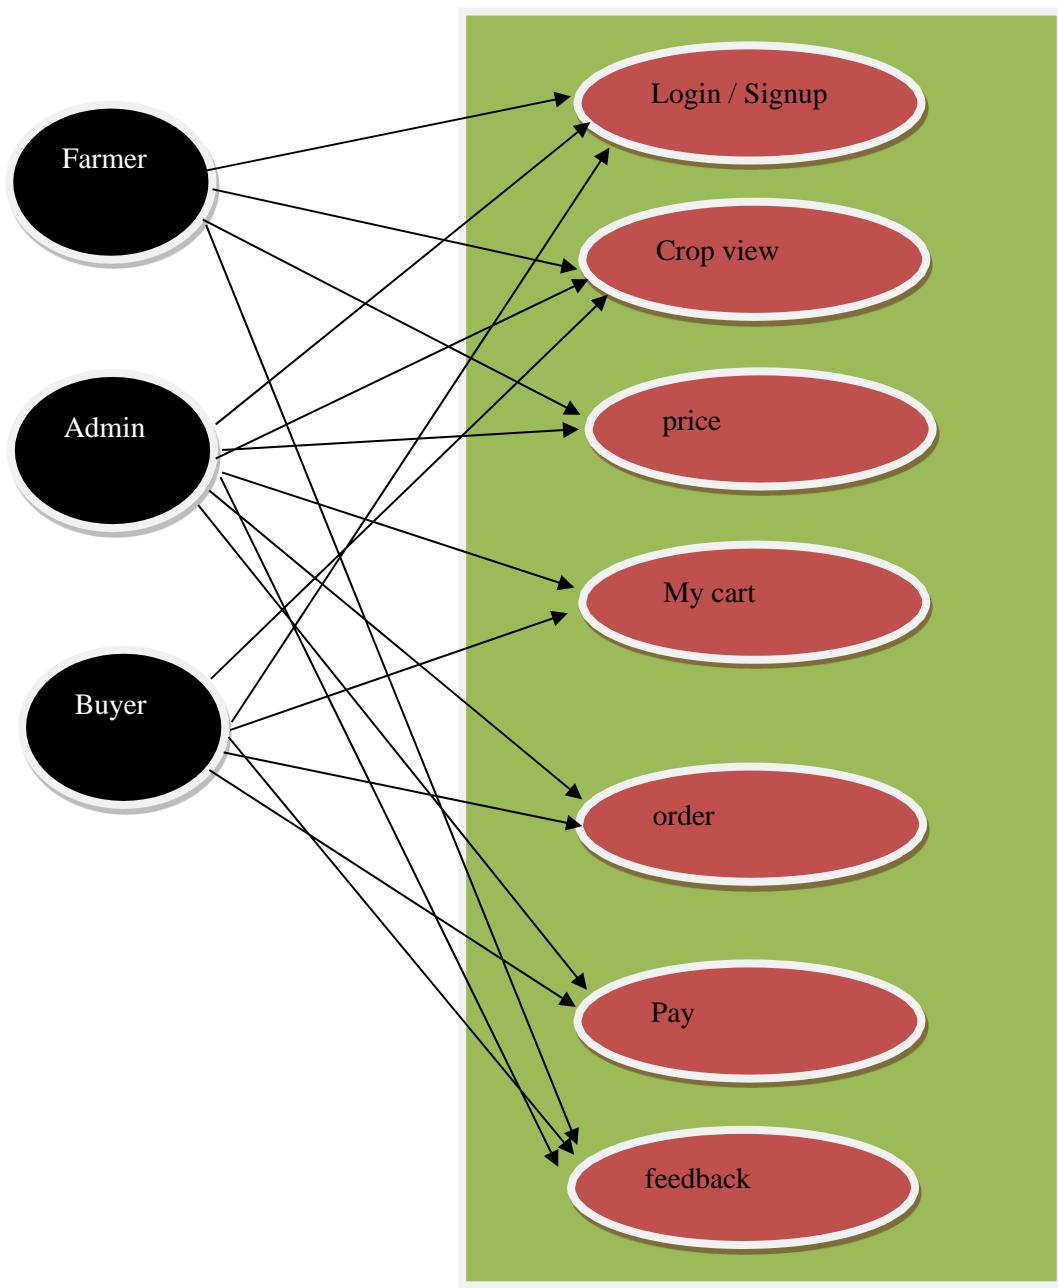

Login DFD

Registration DFD

Diagram

Progress

- Created online Database on Maria DB database, so that it can be used for Web Page based Portal.
- Successfully connected Backend of the Web Page based Portal with database.
- Created a basic Schema for buyer.
- Created all the controllers required for creating a new account of the buyer and farmer (User).
- Created all the controllers required for signing in account of the Buyer and farmer (User).
 - Created all the controllers required for signing out Buyer and farmer (User) from his/her account.
- Created the route required for creating new account of the Buyer and farmer (User) as <http://localhost:XXXXX/api/signup>.
 - Created the route required for signing in account of the Buyer and farmer (User) as <http://localhost:XXXXX/api/signin>
 - Created the route required for signing out Buyer and farmer (User) from his/her account as <http://localhost:XXXXX/api/signout>.

This screenshot shows the homepage of the Farm Tech System. It features a green header with three circular icons: a clock for 'Digital Market', a speech bubble for 'Agro-Blog', and a person for 'Register with us'. Below the header is a large black section containing the 'About Us' heading and the system's name. It includes contact details like address, phone number, and email. To the right, there's a sidebar with social media links and an activation message for Windows. The bottom shows a standard Windows taskbar with search and pinned application icons.

This screenshot shows the sign-up page for the Farm Tech System. It has a modal window titled 'SignUp' with fields for Name, UserName, Mobile Number, Email, Password, and Retype Password. There is also a large input field for Address. Below the fields are two radio buttons for Category: 'Farmer' (selected) and 'Buyer'. At the bottom are 'Submit' and 'Reset' buttons. The background of the modal shows a sunset over a field of crops. The bottom of the screen shows a Windows taskbar with pinned application icons.

The screenshot shows the homepage of the AgroCulture digital market. At the top, there is a navigation bar with links for Home, MyCart, My Profile: vivekb, Digital-Market, and BLOG. The main title "AgroCulture" is displayed prominently. Below the title, a large green banner features the text "Welcome to Digital Market". On the left side of the banner, there is a "Your Profile" icon (a person silhouette) and a "Search according to your needs" icon (a magnifying glass). On the right side, there is an "Our products" icon (a wheat stalk). A watermark for "Activate Windows" is visible in the background of the banner. The bottom of the screen shows a Windows taskbar with various pinned icons and a search bar.

The screenshot shows the product menu page of the AgroCulture digital market. The layout is similar to the homepage, with the AgroCulture logo at the top and a navigation bar below it. The main content area displays three product categories: "Mango" (with an image), "Ladyfinger" (with an image), and "Bajra" (with an image). Each category has a "List All" button and a "Go!" button next to it. A watermark for "Activate Windows" is visible in the background. The bottom of the screen shows a Windows taskbar with various pinned icons and a search bar.
